集装箱用冷轧钢带 The production of container for cold rolling	--	Q700NQJ	0.8-2.0	900-1400	采用相变强化为主，析出强化为辅的 强化机制，获得最终组织以贝氏体+马 氏体为主，含有少量的铁素体。主要 用于集装箱、工程机械、汽车结构件。 Using transformation strengthening, precipitation strengthening and supplemented by the strengthening mechanism, get the final organization to bainite + martensite, containing a small amount of ferrite. Container, engineering machinery, automotive structural parts.
